DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claim 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tapp (US5,657,076) in view of Johnson (US 6,175,373).

Re claims 1-6, Tapp discloses a security control system comprises at least one monitor (36 of fig. 1) for observing an image captured by one or more cameras (20, 22, 24, 26 of fig.1), where the monitor display multi-video sources are provided from the cameras to the monitor (PIP of fig. 1) associated with plurality detectors (112, 14, 16, 18 of fig. 1) to trigger the cameras. Tapp further teaches the observation cameras (20, 22, 24,26) and an observation monitor unit (28, 30, 32, 34, and 36 of fig. 1) with a processor as considered controller (40 of fig. 1) and monitor (36) included PIP coupled to the observation cameras, where the observation unit further comprises means (12, 14, 16, 18 of fig. 1) for detecting an observation relevant event; a recording means (70 of fig. 1) for recording/storing a plurality of images including an image at a

time of the event ; means (36) with PIP for displaying plurality of images simultaneously in a multiple display format such as split screen or quad screen based upon the event (col. 4, lines 15-20). So this would suggest that multiple display formats would be in single image of full screen or a sub-sampled image as desirable.

It is noted that the PIP for displaying plurality of images simultaneously in a multiple display format such as split screen or quad screen based upon the event by Tap but ~~the PIP is not repeatedly displaying a sequence formed by plurality of images~~. However, Johnson teaches the PIP (126 of fig. 3) is repeatedly displaying a sequence formed by a plurality of images from a buffer (131 of fig. 3), where the images of the sequence are provided to the display monitor repeatedly. Therefore, it would have been obvious to one of ordinary skilled in the art to modify the PIP (126 of fig. 3) of Johnson into the display (36 of fig. 1) of ~~Johnson~~ ^{Tap} for the same purpose of repeatedly displaying the sequence formed by the plurality images. Doing so would allow the user to view the desired event constant without rewinding the tape or reloading image from a memory and reduce the time and its cost.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the previous Office Action.
